

8. Control direction

The summary program of this experiment is shown below:

1. Search for blocks

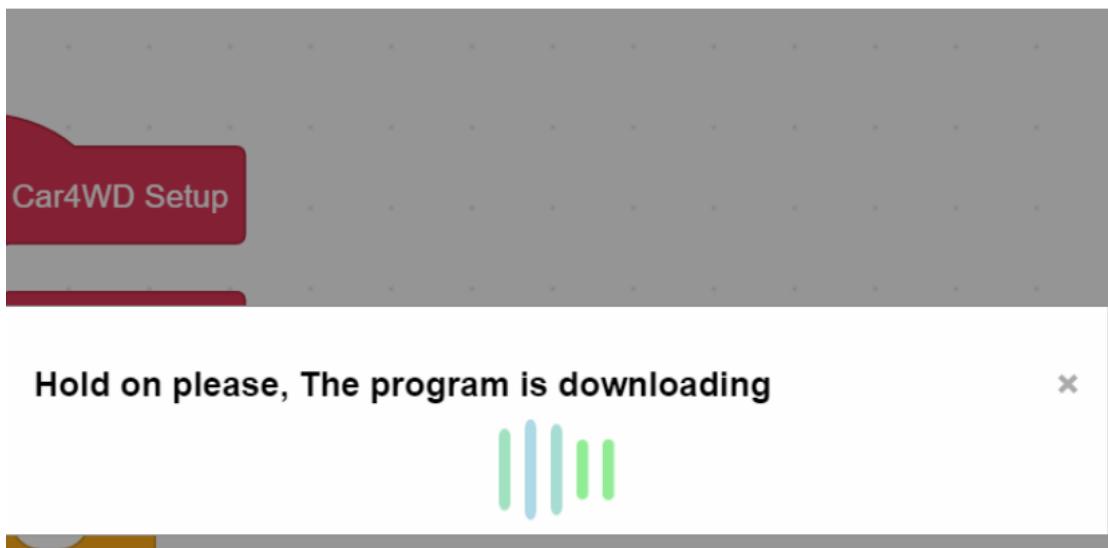

2. Download program

2.1 In the upper right corner of Helloblock, we need to select the port that the serial number displayed by the device manager (for example:COM54) As shown in the figure below.

2.2 Click the up arrow to start compiling and uploading the program. It will take a certain amount of time, we need to wait patiently.

It takes a certain amount of time to compile the program, and everyone needs to wait patiently.

2.3 When the words "Done compiling" "Done uploading" appear in the lower right corner of the programming interface, as shown in the following figure, the program has been uploaded.

```
>C:\Program Files
(x86)\Helloblock\resources\Arduino\libraries\YahBoo
m\YahBoom_OMIBOX.cpp:381:6: note: initializing
argument 1 of 'void
YahBoom_OMIBOX_Matrix::YahBoom_OMIBOX_Matrix_ShowIc
on(byte*)'

    void
YahBoom_OMIBOX_Matrix::YahBoom_OMIBOX_Matrix_ShowIc
on(byte *character)

>Sketch uses 3292 bytes (10%) of program storage
space. Maximum is 32256 bytes.
>Global variables use 842 bytes (41%) of dynamic
memory, leaving 1206 bytes for local variables.
Maximum is 2048 bytes
Done compiling. Done uploading!
```

A red arrow points from the text 'Done uploading!' in the terminal output towards the top right corner of the screen where the status message would typically appear.

3.Experimental phenomena

After the program is downloaded, we can see that the car will advance 1s, back 1s, turn left 1s, turn right 1s, spin left 1s, spin right 1s, stop 1s, and keep looping in this state.
